

Patient and Public Involvement (PPI) in Research – Case Study

Provided by:
Pip Large - Clinical Research Nurse. Sarcoma Research Unit. Nuffield Department of Orthopaedics, Rheumatology and Musculoskeletal Science (NDORMS).
How patients and the public were involved
Patient Focus groups – Dynamic Consent Sarcoma research information leaflet
The impact of involving patients and public in the study
Generated interest in research in general and in particular the transitional research of the study that may directly impact on their future disease outcomes. Reassures patients/public that work is ongoing in the search for a cure!
The importance of involving patients and the public in research
Teaching opportunity - to raise awareness of the early signs/symptoms of rarer cancers. To promote participation and interest in research in general To involve patients/public in decision making in future research projects
The biggest challenges in PPI and what might help to overcome them
Time and distance, working with other specialist centres? Interactive web based platform for information and participation.
